## **CLAIMS 11-28 ARE PRESENTED FOR EXAMINATION**

Applicants' Preliminary Amendment and Information Disclosure Statement filed July 21, 2003 have been received and entered into the application. Accordingly, the specification at page 1 has been amended, claims 1-10 have been canceled and claims 11-28 have been added. Also, as reflected by the attached, completed copy of form PTO-1449 (2 pages), the cited references have been considered.

#### Specification

The abstract of the disclosure is objected to because it fails to be in the form of a single paragraph. Correction is required. See MPEP § 608.01(b) under the subheading "Language and Format".

Further, the specification is objected to because the status of parent application Ser. No. 10/073,330 is not updated to reflect its current status as U.S. Patent No. 6,617,359. Correction is required.

## Claim Rejection - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a method of treating the variety of diseases and/or conditions in a mammal suffering from such disease and/or disorder, does not reasonably provide enablement for a method of treating, in general, a patient who suffers from the above mentioned diseases and/or disorders where, as in the present claims, no specific therapeutic objective is set forth for

A 2/25/04

Application/Control Number: 10/623,775

Art Unit: 1614

Ÿ

the actual treatment.

Insofar as no therapeutic objective to be achieved in the patients suffering from the diseases/disorders has been set forth in the claims, the purpose of "treating" is not limited and such reads the use of the claim designated ingredient as a panacea. The art currently is unaware of any single agent, or combination of agents that could be used for the treatment of any and all disease states. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

The factors to be considered in determining whether a disclosure meets the enablement requirement of 35 U.S.C. 112, first paragraph, have been described in In re Wands, 8 USPQ2d 1400 (Fed. Cir. 1988). Among these factors are: (1) the nature of the invention; (2) the state of the prior art; (3) the relative skill of those in the art; (4) the predictability or unpredictability of the art; (5) the breadth of the claims; (6) the amount of direction or guidance presented; (7) the presence or absence of working examples; and (8) the quantity of experimentation necessary.

When the above factors as applied to the present application (see below) are weighed, it is the examiner's position that the present specification would only enable the skilled artisan to practice a method of treatment wherein the therapeutic objective of such treatment has been set forth.

(1) The nature of the invention.

The claims set forth merely a method of treating a host who is defined by the disorder from which he/she is suffering.

(2) The state of the prior art.

The art currently is unaware of any single agent, or combination of agents that could be used for the treatment of any and all disease states which is encompassed by the present claims.

(3) The relative skill of those in the art.

Art Unit: 1614

Ų

The relative skill of those in the art is high.

(4) The predictability or unpredictability of the art.

The unpredictability of the pharmaceutical chemistry/medical art is very high.

As an example of the unpredictability in the art, the Examiner points to two very well known therapeutic agents, namely quinine and quinidine. Quinine and quinidine differ from each other only in that they are mirror images of each other. However, the therapeutic activity of each is quite distinct. Namely, quinine is effective for reducing a fever or as an anesthetic, while quinidine finds application as a cardiac suppressant.

(5) The breadth of the claims.

The claims set forth merely a method of treating a host who is defined by the disorder he/she is suffering.

(6) The amount of direction or guidance presented.

There is adequate direction and guidance provided throughout the present specification that would enable the skilled artisan to practice a method of treating the variety of diseases/disorders in a mammal suffering therefrom. This, however, is not the scope of the claimed invention as it is directed to the broad objective of "treating a patient" who suffers from certain diseases/disorders.

(7) The presence or absence of working examples.

The present specification contains no working examples that would enable the skilled artisan to practice the invention of the scope presently claimed.

(8) The quantity of experimentation necessary.

Because of the fact that the art is currently unaware of a agent that is broadly useful for "treating a patient", no amount of experimentation, undue or otherwise, could be employed by the skilled artisan to arrive at the claimed objective.

Art Unit: 1614

## Suggestion for Overcoming the Above Rejection

In order to overcome the present rejection, applicants may wish to consider amending the independent claims to read in the following or a similar manner. As an example, the Examiner will use present claim 11 (in-part):

"11. A method for treating cardiovascular disease in a mammal suffering therefrom, which method comprises...".

#### Double Patenting

Claims 11-28 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11-27 of U.S. Patent No. 6,617,359 (Wohlfart et al.). Although the conflicting claims are not identical, they are not patentably distinct from each other because in the present claims, the diseases/disorders are merely divided differently among the several claim sets than in the patented claims.

Also, while the present claims are silent as to the action of the claimed compound, i.e., 4-fluoro-N-indan-2-yl benzamide, to stimulate the expression of endothelial NO-synthase in the host as in the patent claims, such would be an inherent feature of the present methods because in both the patented claims and the present claims the same host is being treated with the same active agent.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground

Art Unit: 1614

provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ray Henley whose telephone number is 571-272-0575. The examiner can normally be reached on M-F, 8:30 am to 4:00 pm Eastern Time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marianne Seidel can be reached on 571-272-0584. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
